

Press Release

January 11, 2009

Sherrie J. Mertes, CEO

We are proud to announce we have successfully installed our dairy business software in our 100th dairy plant!

Our dedication to excellence, investments into research and development and client feedback has helped us achieve this goal.

With 100 dairy plants now utilizing our software, DSI will be launching a new look for both our company and our software product trademark. This new product name will be called DairyTracker™. This will include our milk procurement suite, manufacturing/distribution suite, and bar code inventory management system.

We would like to sincerely thank all of our customers for the opportunity to help them grow and improve their profits over the many years we have been dedicated to the dairy industry.

Dairy and Food Customer Testimonials

DSI truly knows the Dairy Industry. I did not expect a business software company to be able to audit my plant floor processes and map out a strategy to not only reduce my current shrink by 64%, but also map out a real time plant floor to top floor shrink tracking data system as well. The time my team spent with DSI's systems manager was money well spent.
Steve Pelkey – Plant Manager HP Hood.

Key Benefits:

- FMO Reporting
- On-Time Go-Lives
- 50% Less Shrink
- Productive Workers
- Lab Labor Savings
- Maximized Up-Time
- Effective Reporting
- Yield Analysis
- Reduced Data Entry
- True Costing
- Lot Traceability
- Reduced Spoilage

Starting up a new company offers many challenges, risks and rewards. We chose DSI as our preferred dairy business solutions firm because they offered more than just software, they offered guidance on how to set up and run a dairy plant's operations using state of the art technology and industry proven methods. These suggestions allowed for on-time go-lives, and thousands of dollars in operational savings.
Mike Compston – Managing Partner, Western Dairy.

DSI's dairy software modules are designed to save our company labor hours while improving data entry accuracies. These savings are achieved from their direct data feeds between our milk truck weigh scales and their milk procurement modules and our laboratory test equipment to their Laboratory Information Management Software, (LIMS) module.
Dale Brittan – I.T. Director, Brewster Dairy, Inc.

We purchased our first version of DSI business software in 1984. Since that time, DSI's software has evolved in concert with the dairy industry as well as our own specific business growth needs. DSI has consistently provided real value to our company on a consistent basis.
Kevin Baker – V.P. Finance, Baker Cheese.

From milk procurement through cheese production DSI's business software modules are truly designed for the dairy industry. Tracking plant loss at the milk component level, tracking yield variances using the Van Slyke equation and tracking product quality by vat provides us the information we need to maximize our operational efficiencies.
Tom Koskamp – Assistant Plant Manager, Wapsie Valley Creamery.
